THROTTLE LEVER STOP BRACKET KIT (A-78976A1)

(Attach Service Bulletin Sticker to Section 8C Index Page of Your Service Manual.)

Throttle Lever Stop Bracket Kit (A-78976A1) must be installed on all Merc 1500 Outboards (short and long shaft) that are equipped with Power Trim and use the new TrimControl (A-76334A10 thru A40) with trim control buttons in handle. This kit is required to eliminate deflection of the wide-open-throttle stop which causes timing advance.

Order a quantity of Throttle Lever Stop Bracket Kits from your Branch or Distributor immediately. Notify all of your Merc 1500 customers, who are using the A-76334A-TrimControl, to bring their outboards in for installation of the kit at no-charge to them. Installation instructions are included with the kit.

One-half (0.5) hour will be allowed for each kit installation. More than one kit installation can be placed on a warranty claim, provided that all serial numbers are listed.
