Powerhead & Adaptor Plate Bolt Torque - 25 thru 60 Four Stroke

Models Affected

MERCURY/MARINER

USA Production

25 Four Stroke
1998 to Present
S/N 0G590000 and above

30/40 Four Stroke
1999 to Present
S/N 0G760300 and above

40/50/60 Four Stroke
2001 to Present
S/N 0T178500 and above

Belgium Production

25, 30/40, & 40/50/60 Four Stroke
2001 to Present
S/N 0P094500 and above

Situation

The 25, 30/40 and 40/50/60 four stroke service manuals have an incorrect torque listed in various locations for the eight 8 mm X 110 mm powerhead bolts and the five 8 mm X 45 mm rear adaptor plate bolts. The incorrect torque listings in the manuals are both above and below the proper torque specification. We have received reports of powerhead bolts breaking when tightened and we are also concerned that the bolts may not be tightened as designed. Cut out correction stickers are supplied to update the service manuals until the next service manual revision occurs.

This document is provided for the sole and exclusive use of the original recipient as prescribed by Mercury Marine and may not be distributed or copied, digitally or otherwise, without the prior written consent of Mercury Marine.

Correction

The correct torque for the eight 8 mm x 110 mm powerhead bolts and the five 8 mm x 45 mm adaptor plate bolts is the same. The bolt must be dry, also.

Torque 28 lb-ft (38 Nm) With A Dry Bolt

The correct torque sequence is also very important for product durability. It begins in the center and finishes at the outside ends.

Cut out and apply the correction stickers that are included with this bulletin on the appropriate service manual pages.
