

New Identification Decal

Current and future Force Outboard motors will be identified by the SERIAL NUMBER IDENTIFICATION SYSTEM (Mercury system). The serial numbers start with "OE". The serial numbers are consecutive and do not contain any coded information.

The identification decal has also been moved. The identification decal is now located on the starboard side of the swivel bracket. The former location was on the port transom bracket. If the decal is removed, the word "VOID" will appear on the decal.

For parts identification using microfiche or printed parts catalog, please use the 1992 model number ending with a "C" for the balance of this model year. For the 1993 model year, all parts catalogs and microfiche will be issued with serial numbers.
